## 1 Introduction

This document is intended to document the commands sent to the ACC and ACDC cards.

It includes source listings of the source and destinations for each command as they were when this documentation was written. New implementations may have been written since, but that is outside the scope of this document.

## 2 Commands

2.1	Template . . . . .	4
2.1.1	Bit Fields . . . . .	4
2.1.2	Source . . . . .	4
2.1.3	Destination . . . . .	4
2.2	Sync Usb . . . . .	6
2.2.1	Bit Fields . . . . .	6
2.2.2	Source . . . . .	6
2.2.3	Destination . . . . .	6
2.3	Align LVDS . . . . .	7
2.3.1	Bit Fields . . . . .	7
2.3.2	Source . . . . .	7
2.3.3	Destination . . . . .	7
2.4	Toggle LED . . . . .	8
2.4.1	Bit Fields . . . . .	8
2.4.2	Source . . . . .	8

2.5	Set Slef-trigger Lo . . . . .	10
2.5.1	Bit Fields . . . . .	10
2.5.2	Source . . . . .	10
2.5.3	Destination . . . . .	11

## 2.1 Template

### 2.1.1 Bit Fields

Figure 1: Command 0xE bit fields

Bit Range	Name	Description
31-24	MSB	This is really the most significant byte
23-20	<b>0xE</b>	Command marker
19-0	Data	All of the data.

### 2.1.2 Source

acdc-daq:src/DAQinstruction.cpp

```
void SuMo::software_trigger_slaveDevice(unsigned int
    ↪ SOFT_TRIG_MASK, bool set_bin, unsigned int bin)
{
    usb2.createHandles();
    const unsigned int hi_cmd = 0x000E0000;
    unsigned int send_word = hi_cmd | SOFT_TRIG_MASK | set_bin <<
        ↪ 4 | bin << 5;
    usb2.sendData(send_word);
    usb2.freeHandles();
}
```

### 2.1.3 Destination

ACDC-Firmware:SRC/dff\_async\_rst.vhd

```
library IEEE;
use IEEE.STD_LOGIC_1164.all;
use IEEE.numeric_std.all;
```

```
entity dff_async_rst is
    port( d, clk, reset: in std_logic;
          q: out std_logic);
end dff_async_rst;
architecture behav of dff_async_rst is
    begin
        process(clk,reset)
        begin
            if (reset='1') then
                q <= '0';
            elsif rising_edge(clk) then
                q <= d;
            end if;
        end process;
    end behav;
```

## 2.2 Sync Usb

This command does something regarding to syncing the usb

### 2.2.1 Bit Fields

Figure 2: Command 0xF bit fields

Bit Range	Name	Description
19-16	<b>0xF</b>	Command marker
0	En	Boolean to enable or disable usb sync

### 2.2.2 Source

acdc-daq:src/DAQinstruction.cpp

```

void SuMo::sync_usb( bool SYNC) {
    createUSBHandles();
    if(SYNC != false) { //enable USB_SYNC
        usb.sendData(( unsigned int)0x000F0001);
        if(mode == USB2x) usb2.sendData(( unsigned int)0x000F0001
        ↪ );
    } else { //disable USB_SYNC
        usb.sendData(( unsigned int)0x000F0000);
        if(mode == USB2x) usb2.sendData(( unsigned int)0x000F0000
        ↪ );
    }
    closeUSBHandles();
}

```

### 2.2.3 Destination

## 2.3 Align LVDS

This command aligns the LVDS system between the central card and any acdc boards. The LVDS system is the RJ-45 connection.

### 2.3.1 Bit Fields

Figure 3: Command 0xD bit fields

Bit Range	Name	Description
19-16	<b>0xD</b>	Command marker

### 2.3.2 Source

acdc-daq:src/DAQinstruction.cpp

```
void SuMo::align_lvds()
{
    createUSBHandles();
    usb.sendData((unsigned int)0x000D0000); //toggle align
    ↪ process
    if(mode == USB2x) usb2.sendData((unsigned int)0x000D0000);
    closeUSBHandles();
}
```

### 2.3.3 Destination

## 2.4 Toggle LED

This command toggles the LED on all connected boards.

### 2.4.1 Bit Fields

Figure 4: Command 0xA bit fields

Bit Range	Name	Description
28-25	Board Address	The address of the board. Default is 0xF
19-16	<b>0xA</b>	Command marker
0	Enable	Boolean to enable or disable the leds

### 2.4.2 Source

acdc-daq:src/DAQinstruction.cpp

```

void SuMo::toggle_LED(bool EN)
{
    unsigned int boardAdr_all = 15;

    createUSBHandles();
    unsigned int send_word = 0x000A0000;
    send_word = send_word | boardAdr_all << boardAdrOffset;

    if(EN != false){
        usb.sendData(send_word | 0x1);
        if(mode == USB2x) usb2.sendData(send_word | 0x1);
    }
    else{
        usb.sendData(send_word);
        if(mode == USB2x) usb2.sendData(send_word);
    }
    closeUSBHandles();
}

```

### 2.4.3 Destination

## 2.5 Set Slef-trigger Lo

This command sends certain trigger commands

### 2.5.1 Bit Fields

Bit Range	Name	Description
28-25	Board Address	The address of the board. Default is 0xF
19-16	<b>0xA</b>	Command marker
0	Enable	Boolean to enable or disable the leds

### 2.5.2 Source

acdc-daq:src/DAQinstruction.cpp

```

void SuMo::set_self_trigger_lo(
    bool ENABLE_TRIG,
    bool SYS_TRIG_OPTION,
    bool RATE_ONLY,
    bool TRIG_SIGN,
    bool USE_BOARD_SMA_TRIG,
    bool USE_COINCIDENCE,
    bool USE_TRIG_VALID_AS_RESET,
    unsigned int coinc_window,
    unsigned int boardAdr,
    int device)
{
    const unsigned int hi_cmd = 0x00070000;
    unsigned int send_word = hi_cmd | 0 << 11
        | USE_TRIG_VALID_AS_RESET << 6
        | USE_COINCIDENCE << 5
        | USE_BOARD_SMA_TRIG << 4
        | TRIG_SIGN << 3 | RATE_ONLY << 2
        | SYS_TRIG_OPTION << 1 | ENABLE_TRIG
        | coinc_window << 7

```

```
    | boardAdr << boardAdrOffset;
    //printf("%i\n", send_word);

    createUSBHandles();

    if(device == 0)                usb.sendData((unsigned int)
        ↪ send_word);
    if(device == 1 && mode == USB2x) usb2.sendData((unsigned int)
        ↪ send_word);

    closeUSBHandles();
}
```

### 2.5.3 Destination
